

Data Center Services | Colocation Solutions

Wave's managed colocation services provide reliable networking, power and physical security for a cost-effective business continuity and disaster recovery solution.

When you need:

- Secured server environment
- Uninterrupted power
- Disaster recovery
- Flexibility and scalability
- Custom-build solutions

Why choose Wave:

- State-of-the-art redundant systems that assure network up-time, power availability, cooling, and security
- Power density up to 30kW per rack and flexible power options
- 24x7 network operations monitoring and security

Wave's colocation can also be used to create a gateway to improve bandwidth utilization and reduce networking costs. Rather than managing separate connections to the internet from multiple sites or paying for unused bandwidth, you can connect them all to a single hub location with a shared connection to the internet.

Our colocation services provide:

Reduced IT Infrastructure & Management Costs

Rather than invest capital in backup generators, UPS and HVAC units, network build-outs, and staff, you can leverage our carrier-neutral data center the infrastructure and personnel are already in place. You have access to the best facilities available for a fixed monthly fee.

Business Continuity and Disaster Recovery

Our self-healing fiber rings protect your critical data and provide superior network availability and resiliency. We stand behind our solutions with an end-to-end industry-leading Service Level Agreement (SLA) that extends across our backbone, metro core and last-mile network for fiber-based services. Colocation is fully redundant: air conditioning, UPS (uninterruptible power systems), power generators, utility power, network routers, Internet backbone with plenty of extra capacity, and even technical staff resources. 100% up-time is our goal.

Custom Builds and Private Suites

Wave will build custom suites and also offers private suites (in Mountain View), providing the ultimate in privacy and another level of security.

Scalability

As your business grows, the infrastructure is already in place to accommodate your needs for more rack or floor space, additional bandwidth, faster connection speeds, etc. Wave's colocation space, power, bandwidth and connection speeds can all be increased or decreased to meet your business demands.

Security

You can access your equipment any time night or day with security credentials. Sites are staffed and monitored 24/7 by trained professionals. No one gets in or out without proof of identity and all visitors are checked against customer-defined access lists.

24/7 Support

Wave's dedicated local service and support professionals will ensure your communications infrastructure remains up and running, so you can focus more on innovation and customer service.
